Dynasole spray booths are positive pressurised and work on vertical down draft principle.

Downward air flow draws overspray away from the vehicle and breathing zone of operator, leading to smooth finish, healthier and more comfortable working environment.

How Dynasole Spray Booths work :

Dynasole

Hot Air Generator (Blower cum Heat Exchanger unit) is made of two compartments to breath fresh air from top only. Its large pre-filter area, enhances the life of expensive ceiling filters.

Every part is accessible from all sides and designed for easy serviceability. Just by tilting four stoppers, we can see the motor, blower and the condition of the Pre-filters.

Double Inlet Forward Curved Heavy Duty Fan for High Volume of air and Silent Operation. "amca" certified blowers.
Automatic New Generation Imported Diesel Burner
Ceiling Filters - Imported, High performance EU-5 grade (DIN 24185) filters with more dust holding capacity
Pre Filters - Imported, EU-3 grade to arrest dust upto a level of 10 microns
Actuator - Belimo, Switzerland make, for automatic Damper movement
